

Drum Jogger

Astec's Drum Jogger stands out as a cutting-edge maintenance instrument, ensuring accurate and prompt drum positioning. An essential tool for asphalt plant operators, enhancing maintenance efficiency and reducing costs.

ELECTRICAL ENERGY SAVINGS

Unlike traditional methods that require starting large electric motors, the Drum Jogger is operated by a hydraulic power pack. You will no longer have to power the plant to perform drum maintenance. This feature is particularly advantageous during the off-season when the plant is not in full operation thereby avoiding costly demand charges.

DRUM CONTROL

Equipped with near-drum control capabilities, the Drum Jogger allows operators to visually assess and adjust the drum's position with precision. This feature enhances the efficiency of the maintenance process and minimizes the risk of errors.

SLOW ROTATIONAL SPEED

This tool is designed to rotate at a slow speed, ensuring movement is controlled and accurate. This deliberate rotational speed increases the likelihood of hitting the desired position on the first attempt.

SCAN TO LOCATE A PARTS SALES REPRESENTATIVE

NOTE: Drum Jogger guard not shown for clarity. Never operate without guard.
Consult factory for exact dimensions, specifications are subject to change without notice.
